Generator Set Performance

Voltage Regulation

Maintains voltage output within ±1,0%

in the following conditions:

- 1. At any power factor between 0.8 and 1.0
- 2. At any load level from no load to full load.
- 3. At speed droop variations up to 4,5%.

Frequency Regulation

Isochronous under any load, from no load to 100% full load when electronic governor is fitted.

Random Frequency Variation

Will not exceed $\pm 0,25\%$ of rated frequency value for constant loads, no load to full load.

STANDBY POWER RATING (ESP)

The Standby Power Rating is applicable for supplying emergency power for the duration of a utility power interruption. No overload, utility parallel or negotiated outage operation capability is available at this rating. In installations served by unreliable utility sources (where outages last longer or occur more frequently), where operation is likely to exceed 200 hours per year, the prime power rating should be applied.

PRIME POWER (PRP)

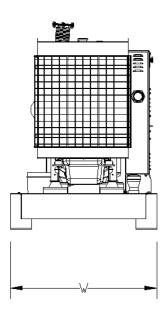

Prime power is available for an unlimited number of annual operating hours in variable load applications, in accordance with ISO8528-1. A 10% overload capability is available for a period of 1 hour within a 12-hour period of operation.

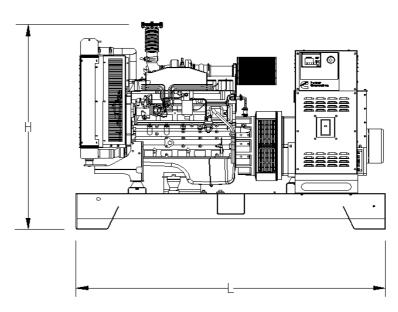

All ratings are based on the following reference conditions:

- Ambient temperature: 27ºC

- Altitude above sea level: 150 meters

- Relative humidity: 60%
